TrustBio, A Solution Provider.
Let's Innovate Your World Together !

ABOUT US

TrustBio Corporation was established in 2022 and is focused on providing simple and fast tools for molecular testing. Our team is composed of managers and researchers with over 10 years' experience in molecular diagnostics market and the field of molecular biology that guarantee the most optimal solutions to help our partners to reach their goals.

We TrustBio is also a customer oriented company in a wide range of portfolios, from sample preparation to downstream applications, smart and reliable IVD & Research tools, it is a leading biotechnology company offering products and complete laboratory solutions to meet all of customer needs.

TrusPure System

Magnetic Beads Extraction Instruments

TrustBio Corporation

TrusPure System

Magnetic Beads Extraction Instruments

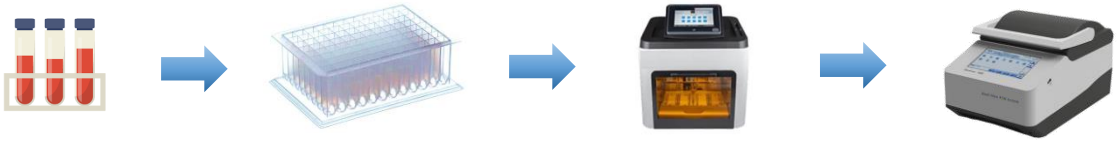

TrusPure 32 Extraction System

Product Introduction

The semi-automatic TrusPure 32 nucleic acid extraction instrument is a high-throughput, which can extract and purify nucleic acids from a variety of biological samples such as whole blood, virus, tissues, plant, FFPE bacteria, cfDNA, urine by using prefilled TrusPure extraction kit based on superparamagnetic silicon-based beads.
TrusPure 32 can be used for purification and concentration of nucleic acid through the adsorption, transfer and release of magnetic beads by magnetic pillar. As TrusPure 32 is rapid and simple operation, it is widely applied in the fields of molecular diagnosis and animal epidemic disease detection.

Workflow Process

Sample collection → Adding samples into prefilled cartridge → Nucleic Acids Extraction → Quantitative detection

Key features

Rapid process time for high throughput
10 minutes for up to 32 samples.
Easy set up, no training required.

High yield & purity, excellent repeatability
More than 95% magnetic bead recovery
No cross-contamination risk

TrusPure System

Magnetic Beads Extraction Instruments

Universal open platform

Compatible with a wide range of 96 deep well plate.

Flexible of protocol setting

Flexible program editing capabilities to meet different reagent needs ;
Up to 20 customized extraction protocols could be set up.
Easy & intuitive input and edits using the built-in 7” touch screen.

Specifications

TrusPure 32 Extraction System	
Sample capacity	32 samples/run
Sample input volume	50 – 300 µl
Elution volume	80 – 200 µl
Sample Volume	200 µl
Extraction time	10 – 50 minutes/run
Display	Built-in 7” touch screen
Sample Type	Serum, Plasma, Mammalian Whole Blood, Buffy Coat, Bacterial Suspension, Tissue Lysate, etc
Downstream Application	PCR, qPCR, Sanger sequencing, NGS, Genotyping, etc
Plate type	2.2 ml 96-well deep well plate
Supported reagents	Open platform, for magnetic bead based kits
Protocol management	Free editable protocols ; up to 20 extraction protocols
UV decontamination	Built-in
Dimensions (W×D×H)	420 × 345 × 485 mm
Weight	25 kgs
Power supply	110 – 240 V, 50 – 60 Hz, max. 500VA

TrusPure System

Magnetic Beads Extraction Instruments

TrusPure 96 Extraction System

Product Introduction

TrusPure 96 Extraction System ,designed according to the principles of magnetic bead method and rotary nucleic acid extraction technology, TrusPure 96 Extraction System can well overcome the shortcomings of traditional nucleic acid extraction methods and achieve the rapid and efficient preparation of nucleic acids from a large number of samples.

With the appropriate nucleic acid extraction reagents, this instrument can process serum, plasma, whole blood, swabs, amniotic fluid, feces, tissue and tissue lavage, paraffin sections, bacteria, fungi and other sample types.

TrusPure 96 Extraction System is widely used in the fields of disease prevention and control, animal quarantine, clinical diagnosis, entry-exit inspection and quarantine, food and drug administration, forensic medicine, teaching and scientific research.

TrusPure System

Magnetic Beads Extraction Instruments

Specifications

TrusPure 96 Extraction System	
Sample capacity	1~96 samples/run
Sample input volume	30 – 1000 µl
Elution volume	200 µl
Sample Volume	200 µl
Suitable consumables	96 deep well plate ; 8 tube strips
Rotating speed	≦3000 rpm
Temperature control range	Pyrolysis heating: room temperature ~ 120°C Elution heating: room temperature ~ 120°C
Mixing method	Rotational mixing
Operation mode	7-inch full-color LCD touch screen, or app control via a scanner
Program storage	Up to 10000 programs with the built-in modules
Program management	Can be created, edited, applied and deleted with high flexibility
Automated hatch	Motor-driven automatic opening and closing of the experiment cabinet
Magnetic bead residue	<1%
Size and weight	490 mm*510 mm *480 mm (W*D*H), 45 kg
Power supply	AC 220 V, 50 Hz

Magnetic Beads Extraction Instruments & Kits

Liquid biopsy analytes such as cell-free DNA (cfDNA; also known as circulating tumor DNA) and circulating tumor cells (CTCs) both have been identified as potential blood/urine-based biomarkers capable of providing such information from tumor. Nucleic acids detection of pathogens and genetically modified organisms also present the important information from diseases and foods. TrustBio has our own classical magnetic pillar automatic nucleic acids extraction platform and also develops a novel automation platform that can co-isolate nucleic acids and the specific cell population from clinical samples such as plasma and urine at one time. Working with the supporting kits, these two platforms give you a better and higher efficient isolation performance rather than before.

Full automation with ONE touch!

FastCheck Nucleic Acid Detection System & Kits

Nucleic acid detection mainly includes nucleic acid extraction, amplification system preparation, and detection of nucleic acid amplification. With the needs on simpler operation procedures to reduce human error and have less time consumption, TrustBio develops a fully automatic platform that includes a nucleic acids extraction module, liquid handling module, and real-time fluorescent detection module. Working with the supporting kits, the all-in-one platform gives you a wonderful experience in extreme simple and extreme fast experience in your molecular testing.

TrusPure Reagent Kit

Prefilled Cartridge / Bottle format

TrustBio
Corporation

TrusPure Viral Nucleic Acids Extraction Kit

is designed for the rapid and reliable isolation of viral RNA and viral DNA from whole blood, serum, plasma, saliva and other bodily fluids. The purified nucleic acids are suitable for PCR, RT-PCR, and other downstream applications.

Key features

★ Ideal for COVID-19 detection
★ Specialized magnetic bead coating
★ Automatable on open systems
★ 30 Months long shelf-life
★ 10~15 mins process time

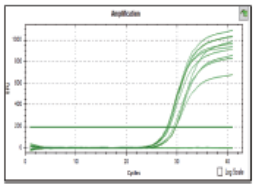

Workflow Process

Collection	Preparation	Real-time PCR	Data analysis

Protocols can be carried out manually or fully automated on the TrusPure Extraction System.

TrusPure Reagent Kit

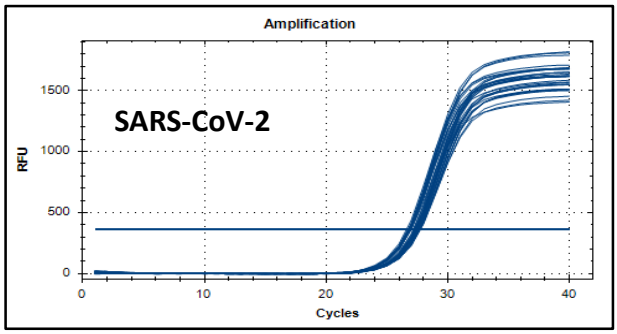

Prefilled Cartridge / Bottle format

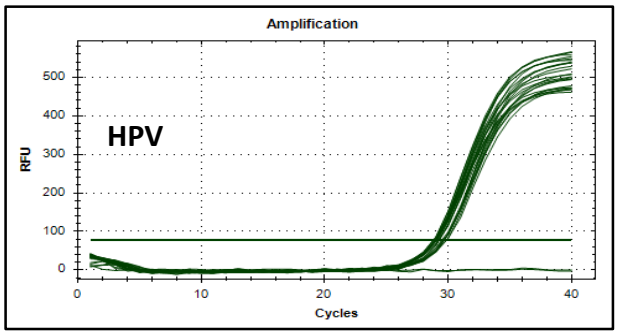

Performance

Highly Efficient & Higher Yields

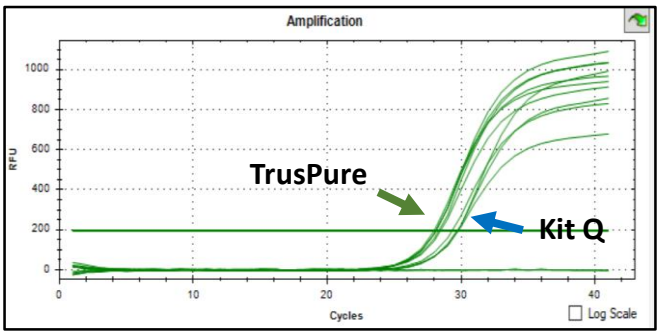

(A) Viral DNA or RNA was isolated by the TrusPure Viral Nucleic Acids Extraction Kit using SARS-CoV-2 positive national standard and HPV positive swab samples and was analyzed by qPCR assay to examine the presence of SARS-CoV-2 RNA and HPV DNA. (B) SARS-CoV-2 RNA was isolated by kits from TrusPure and brand Q (kit Q) and was analyzed by qPCR assay to determine the presence of SARS-CoV-2 RNA.

TrusPure Plasma Cell-Free DNA Extraction Kit

**Starting sample volume for automation from 1~5 mL*

** Starting sample volume for manual from 1~10 mL*

TrusPure Urine Cell-Free DNA Extraction Kit

** Up to 30mL*

Cancer is the leading causes of death worldwide. Screening in both healthy and high-risk populations offers the opportunity to detect cancer earlier. Liquid biopsies, in particular, analysis of circulating cell-free DNA (cfDNA), have emerged as a promising noninvasive strategy for screening and also early detection of cancer. However, there are some challenge to cfDNA extraction due to the low yield of cfDNA in the plasma or urine.

The TrusPure Plasma/Urine Cell-Free DNA Extraction Kits could give you new experience in the simplicity for your molecular test! Let us get the innovation started!

Protocols can be carried out manually or fully automated on the TrusPure Extraction System.

TrusPure Genomic DNA Extraction Kit

This kit is designed for purification of Genomics DNA from various sample types. The procedure upon sample loading until completes in about 20-25 minutes. The purification DNA product is 20–50 kb which can be directly used for downstream molecular biology applications such as PCR, restriction enzyme digestion, Southern blotting and qPCR.

Product Introduction

The kit adopts magnetic beads with unique separation function and a unique buffer system to separate and purify high-quality genomic DNA from all kinds of samples including blood, dry blood spots, saliva, swabs, FFPE, bacteria, animal tissues, etc. The whole process is safe and convenient. With large extracted genomic DNA fragments, high purity and reliable quality, the method is especially suitable for automatic extraction with high-throughput workstations.

Key features

★ Easy-to-use: Simple and easy process.
★ Fast: Extraction completed in 30 minutes.
★ Efficient: High recovery yield.
★ Universal: Ideal for the genomic DNA purification from various samples.
★ Optimized for both manual sample processing and automated workflows.
★ Wide applications: Can be widely used to extract DNA from tissues, bacteria, blood, saliva, swabs, etc.

Protocols can be carried out manually or fully automated on the TrusPure Extraction System.

TrustBio
Corporation

TrusEX Saliva and Swab Extraction-Free Buffer (1ml)

The purification of nucleic acids is not only an early step in research laboratory workflows but also the essential step in the processes of any molecular tests. The TrusEX Saliva and Swab Extraction-Free Buffer is a novel one-step nucleic acids extraction buffer system. The TrusEX buffers include different options of buffer solutions that are developed to extract DNA and RNA from a variety of sample types (including saliva, swab, serum, plasma, and universal) in single tube, without the need for multiple handling and heated steps.

TrusMQ Real-Time PCR System

qPCR Instruments

TrustBio Corporation

TrusMQ Real-Time PCR System

The TrusMQ Real-Time PCR System includes a good-performance, low-, medium- to high-throughput PCR platform (16-, 48-, and 96-wells) for nucleic acids detection. The system features of TrusMQ qPCR Instruments, tube/plate-flexible real-time PCR devices that supports multi-color applications and multiplex protocols.

TrusMQ 16 Real-time PCR System

Product Introduction

Designed for mobile, small laboratories or on-site testing, TrusMQ 16 can be widely applied in food safety, animal disease and infectious disease prevention and control, scientific research, environmental monitoring and other fields, especially animal disease detection. By using with SARS-CoV-2 Nucleic Acid Detection Assay, it provides reliable and high-quality results for the improved management of COVID-19.

Key features

Compact design

Compact size, 3.2 kgs, easy to carry.
7-inch high-definition LCD capacitive touch screen.

High-efficiency testing

16-well dual-color fluorescence scanning within 1 second.
Independent temperature control module, supporting touchdown PCR , long-range PCR, qualitative and quantitative, melting curve, SNP site analysis, etc.

Easy to operate

Special shortcut mode, preset programs for convenient and fast testing.
Various ways to stay online : Internet interface, USB, WiFi
It can directly analyze the data in the stand-alone state, and the results are printable immediately after connecting to the printer.

TrusMQ Real-Time PCR System

qPCR Instruments

Specifications

TrusMQ 16 Real-time PCR System	
Sample Throughput	16
Fluorescence Channels	2
Suitable Consumables	0.2mL transparent single tubes and 8-strip tubes
Compatible Fluorophores	Channel 1: FAM, SYBR Green I, SYTO 9, Eva Green, LC Green Channel 2: HEX, VIC, TET, JOE
Heating Rate	Average heating rate of 3.39°C/s Maximum heating rate of 5.09°C/s
Cooling Rate	Average cooling rate of 3.00°C/s Maximum cooling rate of 4.00°C/s
Temperature Accuracy	≤0.1°C
Light source	High-brightness, long-life, maintenance-free LED light source
Detection Duration	Channel information acquisition within 1 sec for all holes
Temperature Programs	Conventional PCR, touchdown PCR, long-range PCR, etc.
Hot Lid Temperature	40°C – 110°C
Software Analysis	Qualitative analysis, absolute quantitative analysis, relative quantitative analysis, endpoint fluorescence analysis, dissociation curve analysis, and SNP analysis, etc.
Display	7-inch full-colored HD LCD capacitive touch screen
Network Connection	Internet interface, USB, WiFi
Power Failure Protection	Instant power failure protection, seamless automatic recovery of the experiment when restarted
Dimensions and Weight	205mm (L) × 156mm (W) × 153mm (H); 3.2kg

TrusMQ Real-Time PCR System

qPCR Instruments

TrusMQ 48 Real-time PCR System

Product Introduction

TrusMQ 48 Real-time PCR System is specially designed for small and medium-sized laboratories, mobile laboratories, field testing professionals, etc. Able to support absolute quantitative analysis, relative quantitative analysis, isothermal amplification, dissociation curve analysis, genotyping, endpoint fluorescence analysis, etc. With its excellent performance and portability, it can make your experiments more easy-to-use, accurate and efficient.

Key features

Compact design

Compact size, 3.2 kgs, easy to carry.
7-inch high-definition LCD capacitive touch screen.

High-efficiency testing

16-well dual-color fluorescence scanning within 1 second.

TrusMQ Real-Time PCR System

qPCR Instruments

Specifications

TrusMQ 48 Real-time PCR System	
Fluorescence Channels	4
Sample Throughput	48
Authoritative Certifications:	NMPA, CE, FDA ,KFDA, etc.
Compatible Fluorophores	Channel 1: FAM, SYBR Green I, SYTO 9, EvaGreen, LC Green. Channel 2: HEX, VIC, TET, JOE. Channel 3: ROX, Texas Red. Channel 4: Cy5
Lightsource	High-brightness, long-life, maintenance-free LED light source
Detector	Photodiodes (PDs)
Method	Simultaneous well-by-well scanning of all channels
Detection Duration	Detection of 48 wells of all channels completed in 2s.
Heating & Cooling Rates	Maximum heating rate of 8.0°C/s Maximum cooling rate of 6.2°C/s.
Temperature Accuracy	≤0.1℃
Temperature Programs	Conventional PCR, gradient PCR, touchdown PCR, long-range PCR, etc.
Analytical Functions	Qualitative analysis, absolute quantitative analysis, relative quantitative analysis, endpoint fluorescence analysis, dissociation curve analysis, and SNP analysis, etc.

TrusMQ Real-Time PCR System

qPCR Instruments

Specifications

TrusMQ 48 Real-time PCR System	
Sample Linearity & Repeatability	Linearity: /r/≥0.999
	Repeatability: cycle threshold (Ct) value CV≤0.5%
Customized Reporting	Lab report templates of various industries pre-stored
	Open and universal reporting function, user-definable report content and form
LIS Functions	Open data port, synchronized interconnection with LIS system
Power Failure Protection	Automatic recovery of the experiment and other functions when the power is on again after cutting off, without waiting for the power-on of the computer or software control.
Suitable Consumables	0.2mL transparent skirtless 48-well plate, 8-tube strips, and single tubes
Data storage	> 1000 experimental data for stand-alone operation
Stand-alone Analysis Results	No need for an extra computer! Immediate analysis of experimental data on the instrument. Direct printing function to output the sample amplification curve and CT value, simply by connecting to the special thermal printer.
Control method	Stand-alone operation: 7-inch touchscreen control;
	PC software control via direct connection or LAN (local area network)
Size and Weight	260mm*400mm*260mm(W*D*H),11 kg
Power supply	AC 220 V (±10%), 50 Hz, 600 VA.

TrusMQ Real-Time PCR System

qPCR Instruments

TrusMQ 96 Real-time PCR System

Product Introduction

TrusMQ 96 Real-time PCR System is intended for performing rapid, accurate reaction, meanwhile real-time measuring the nucleic acid signals from DNA-binding fluorescent dyes or labeled probes and converts them to comparative quantitative readouts of DNA or reverse transcribed RNA.

Key features

Flexible use

Standard with 10.4 " touch screen, all commands in one touch.
Unique power-off protection function.

Fast and uniform heating system

Concealed lid with constant temperature and isopiestic pressure.
Highly efficient PID & DSP control algorithm ensures faster respond and stronger interference resistance, fast and uniform heating and heating sinking.

High sensitive and precise optical system

High-sensitivity and wide dynamic range of fluorescence detection.
Fast and precise mechanical scanning structure.

TrusMQ Real-Time PCR System

qPCR Instruments

Specifications

TrusMQ 96 Real-time PCR System	
Thermal Block	
Sample capacity (wells)	96
Reaction Volume	0-100μL
Consumables	0.2ml 96-well Plates (unskirt), 0.2ml 8-strip tubes, 0.2ml PCR single tube(Optical flat cap, clear, frosted, white tube)
Temperature range	0°C – 100°C
Heating/cooling method	Peltier
Max heating rate	6.1°C/s
Average heating rate	4.5°C/s
Max cooling rate	5.0°C/s
Average cooling rate	2.8°C/s
Temperature accuracy	±0.1°C
Temperature uniformity	±0.1°C
Gradient Range	1°C – 40°C
Gradient block	12 row
Special protocol	Gradient PCR, Long PCR, Touch Down PCR
Heat Lid	
Temperature range	Room Temperature – 110°C

TrusMQ Real-Time PCR System

qPCR Instruments

Optical System	
Excitation Source	6LEDs
Detector	Photodiode
Detection Position	Excitation and scan at top
Detection method	6 channels scanning at the same time, no edge effect.
Detection time	7 seconds for 96 wells for all channels
Range of excitation/ emission wavelengths(nm)	1.465 / 510 (FAM, SYBR Green I, SYTO9, EvaGreen, LC Green) 2.527 / 563 (HEX, VIC, TET, JOE) 3.580 / 616 (ROX, Texas Red) 4.632 / 664(Cy5) 5.680 / 730 (Alexa Fluor 680) 6.465 / 616 (FRET)
Probe	Taqman Probe, Molecular beacons probe. Scorpion probe, FRET
Multiplexing	Up to 6 targets
Fluorescence Linearity	r≥0.990
Dynamic Range	Adjustable
Performance	
Sample Linearity	/r/≥0.999
Sample repeatability	Ct value CV≤0.5%
Sample Dynamic Range	1 – 10'° copies
Software Functions	
Data Analysis modes	Qualitative analysis, Absolute quantification, Relative quantification, Genotyping analysis, Endpoint analysis, Melt curve analysis, High Resolution Melting analysis

TrusMQ Real-Time PCR Kit

Multiplexed Quantitative PCR Assays (Liquid)

TrustBio Corporation

Multiplexed Quantitative PCR Assays

Quantitative PCR (qPCR), also known as real-time PCR, is a well-established method for the detection and quantification of the amount of amplicons in each cycle using SYBR Green dye or TaqMan chemistry. The TrusMQ detection assay is a multiplexed qPCR based on the TaqMan technology. When performing PCR reaction with the TrusMQ system, two or more target genes are amplified in the same reaction, using the same reagent mix and with the specific primer/probe sets and fluorescent dyes.

Product Introduction

The assays adopt the TaqMan fluorescent PCR technology for the multiplexed and quantitative detection of nucleic acids from pathogens including bacteria, viruses, fungi, and parasites, genetic alterations such as single nucleotide polymorphisms and DNA methylation observed in cancer cells, as well as genetically modified organisms.

TrusMQ Real-Time PCR Kit

Multiplexed Quantitative PCR Assays (Liquid)

DIAGNOVITAL® SARS-CoV-2 Real-Time PCR Kit

It is a RT-qPCR-based detection system for Severe Acute Respiratory Syndrome Coronavirus 2 (SARS-CoV-2). It is a FDA approved COVID-19 test kit.

DIAGNOVITAL® SARS-CoV-2 Real Time PCR Kit is certified and marked with CE-IVD.
It is a FDA approved COVID-19 test kit.

Key features

★ Detection of SARS CoV 2
★ Sample Type: Nasopharyngeal & oropharyngeal swab and bronchoalveolar lavage
★ Target genes:
- SARS CoV 2 E gene
- SARS CoV 2 RdRp gene
- Human extraction control RNaseP gene

★ One Channel: FAM™ for the E and RdRp gene of SARS CoV 2 and the RNAseP (HEC)
★ Components: 50X VitaScriptTM Reverse Transcriptase, 2X qPCR master mix E, 2X qPCR master mix RdRp, 2X qPCR master mix HEC, and positive/negative controls.
★ Validated Devices:
- BIO-RAD CFX96 TOUCH,
- Rotorgene 6000 Real-Time PCR Detection System,
- Applied Biosystems 7500
- QuantStudio 5 Real-Time PCR Detection

★ It is compatible with any thermal cyclers that have FAM Channel.

TrusMQ Real-Time PCR Kit

Multiplexed Quantitative PCR Assays (Liquid)

DIAGNOVITAL® HS SARS-CoV-2 Real-Time PCR Kit v2.0

It is a RT-qPCR-based detection system for Severe Acute Respiratory Syndrome Coronavirus 2 (SARS-CoV-2).

DIAGNOVITAL® HS SARS-CoV-2 Real Time PCR Kit v2.0 is certified and marked with CE-IVD.

Key features

★ Detection of SARS CoV 2
★ Sample Type: Nasopharyngeal and oropharyngeal swab
★ Target genes:
- SARS CoV 2 N1 and N2 regions of Nucleocapsid genes
- Human extraction control RNaseP gene

★ Two different Channels: FAM™ for the SARS CoV 2 and the RNAseP (HEC) is detected in the HEX/VIC channel
★ Components: PCR master mix, positive and negative controls.
★ Compatible Real Time PCR systems: Roche LightCycler 480, Roche LightCycler 96, Qiagen RotorGene Q, Qiagen Rotor Gene Series, Corbett Realtime PCR, BMS Mic, Biorad CFX Connect, Biorad CFX96, Biorad CFX Touch, Applied Biosystem ABI 7500, Applied Biosystem ABI 7500 Fast, Applied Biosystem ABI StepOne, Applied Biosystem ABI StepOne Plus, Thermo Scientific Quant Studio 5, Slan Realtime PCR, Tianlog Gentier 96E, Tianlong Gentier 96R, Stratagene Mx3500p, Azure Biosystems™ Cielo™ 3 and 6 real-time PCR Systems.
★ It is also compatible with any thermal cyclers that have FAM and HEX/VIC Channel.

TrusMQ Real-Time PCR Kit

Multiplexed Quantitative PCR Assays (Liquid)

DIAGNOVITAL® SARS-CoV-2 Multiplex Real-Time PCR Kit

It is a RT-qPCR-based detection system for the Severe Acute Respiratory Syndrome Coronavirus 2 (SARS-CoV-2).

DIAGNOVITAL® SARS-CoV-2 Multiplex Real Time PCR is certified and marked with CE-IVD.

Key features

★ Detection of SARS CoV 2
★ Sample Type: Nasopharyngeal and oropharyngeal swab
★ Target genes:
- SARS CoV 2 N1 and ORF1ab regions
- Human extraction control RNaseP gene

★ Two different Channels: FAM™ for the SARS CoV 2 and the RNAseP (HEC) is detected in the HEX/VIC channel
★ Components: PCR Multiplex mix, Enzyme Mix, positive and negative controls.
★ Validated Devices:
- BIO-RAD CFX96 ,
- Rotorgene 3000/6000 Real-Time PCR Detection System
- Applied Biosystems 7500
- QuantStudio 5 Real-Time PCR Detection
- Himedia Insta Q96 Real Time PCR Detection System

★ It is compatible with any thermal cyclers that have FAM and HEX/VIC Channel.

TrusMQ Real-Time PCR Kit

Multiplexed Quantitative PCR Assays (Liquid)

DIAGNOVITAL® INFLUENZA A/B SARS-CoV-2 Multiplex Real-Time PCR Kit

It is a RT-qPCR-based diagnostic test for the *in vitro* qualitative detection and discrimination of SARS-CoV-2, Influenza A virus, Influenza B virus RNA in respiratory specimens.

DIAGNOVITAL® INFLUENZA A/B SARS-CoV-2 Multiplex Kit is certified and marked with CE-IVD.

Key features

★ Detection of INFLUENZA A/B and SARS CoV 2
★ Sample Type: Nasopharyngeal & oropharyngeal swab and bronchoalveolar lavage
★ Target genes:
- SARS CoV 2 Nucleocapside (N) gene
- Influenza A Matrix 1 (M1) gene
- Influenza B Nonstructural protein 2 (NS2) gene
- Human extraction control RNaseP gene

★ 3 Different Channels: FAM™ for the INFA/B, TEXAS RED for the SARS CoV 2 and the RNAseP (HEC) is detected in the HEX/VIC channel
★ Components: PCR master mix, positive and negative controls.
★ Validated Devices:
- BIO-RAD CFX96
- Rotorgene 3000/6000 Real-Time PCR Detection System
- Applied Biosystems 7500
- QuantStudio 5 Real-Time PCR Detection
- Himedia Insta Q96 Real Time PCR Detection System

★ It is compatible with any thermal cyclers that have FAM, HEX/VIC and TEXAS RED Channel

TrusMQ Real-Time PCR Kit

Multiplexed Quantitative PCR Assays (Liquid)

DIAGNOVITAL® INFLUENZA A/B SARS-CoV-2 RSV Multiplex Real-Time PCR Kit

It is a RT-qPCR-based diagnostic test for the *in vitro* qualitative detection and discrimination of SARS-CoV-2, Influenza A virus, Influenza B virus and Respiratory Syncytial Virus (RSV) RNA in respiratory specimens.

DIAGNOVITAL® INFLUENZA A/B SARS-CoV-2 RSV Multiplex Kit is certified and marked with CE-IVD.

Key features

★ Detection of INFLUENZA A/B, SARS CoV 2 and RSV
★ Sample Type: Nasopharyngeal & oropharyngeal swab and bronchoalveolar lavage
★ Target genes:
- SARS CoV 2 Nucleocapside (N) gene
- Influenza A Matrix 1 (M1) gene
- Influenza B Nonstructural protein 2 (NS2) gene
- RSV Matrix (M) gene
- Human extraction control RNaseP gene

★ 4 Different Channels: FAM™ for the INFA/B, TEXAS RED for the SARS CoV 2, CY5 for the RSV and the RNAseP (HEC) is detected in the HEX/VIC channel
★ Components: PCR master mix, positive and negative controls.
★ Compatible Real Time PCR systems: Roche LightCycler 480, Roche LightCycler 96, Qiagen RotorGene Q, Qiagen Rotor Gene Series, Corbett Realtime PCR, BMS Mic, Biorad CFX Connect, Biorad CFX96, Biorad CFX Touch, Applied Biosystem ABI 7500, Applied Biosystem ABI 7500 Fast, Applied Biosystem ABI StepOne, Applied Biosystem ABI StepOne Plus, Thermo Scientific Quant Studio 5, Slan Realtime PCR, Tianlog Gentier 96E, Tianlong Gentier 96R, Stratagene Mx3500p, Azure Biosystems™ Cielo™ 3 and 6 real-time PCR Systems
★ It is also compatible with any thermal cyclers that have FAM, HEX/VIC, CY5 and TEXAS RED Channel.

TrusMQ Real-Time PCR Kit

Multiplexed Quantitative PCR Assays (Liquid)

RTA® HBV DNA Real-Time PCR Kit

It is an in vitro nucleic acid amplification assay for the quantification of Hepatitis B Virus DNA in human serum or plasma. The kit is designed to be used as an aid in the management of patients with chronic HBV infection undergoing anti-viral therapy to assess response to treatment in conjunction with all relevant clinical and laboratory finding.

Key features

★ Accurate quantitation of genotypes A, B, C, D, E, F, G, H
★ Sample Type: Serum and Plasma (EDTA)
★ Validated Devices and Sensitivity:

- Bio-Rad CFX96-IVD - 10,0 IU/ml
- ABI 7500 - 12,8 IU/ml
- Rotorgene - 127,0 IU/m
- Stratagene Mx3000/Mx3005pp - 22,1 IU/ml
- Light Cycler - 25,1 IU/ml

TrusMQ Real-Time PCR Kit

Multiplexed Quantitative PCR Assays (Liquid)

RTA® HCV Real-Time PCR Kit

It is an in vitro nucleic acid amplification assay for quantification of Hepatitis C virus (HCV) RNA in human serum or plasma (EDTA). The kit has been validated for use with RTA Viral RNA Isolation Kit or RTA Viral Nucleic Acid Isolation for sample preparation and below listed instruments for amplification. All necessary reagents optimized for reliable HCV RNA detection and quantitation.

Key features

★ Accurate quantification of HCV genotypes 1a, 1b, 2, 3, 4, 5 and 6
★ Sample Type: Serum and Plasma (EDTA)
★ Validated Devices and Sensitivity:

- Bio-Rad CFX96-IVD -15,0 IU/ml
- ABI 7500 - 12,6 IU/ml
- Rotorgene - 16,0 IU/m
- Stratagene Mx3000/Mx3005pp - 10,4 IU/ml
- Light Cycler - 123,6 IU/ml

TrusMQ Real-Time PCR Kit

Multiplexed Quantitative PCR Assays (Liquid)

RTA® HIV-I RNA Real-Time PCR Kit

HIV-1 Real-Time PCR Kit is an in vitro nucleic acid amplification assay for the quantification of Human Immunodeficiency Virus RNA in human serum or plasma samples. This diagnostic test kit utilizes the reverse transcription polymerase chain reaction (RT-PCR).

Key features

★ Group M subtypes A—H
★ Sample Type: Serum and Plasma (EDTA)
★ Validated Devices and Sensitivity:
- Bio-Rad CFX96-IVD - 68 IU/ml
- Rotorgene - 94 IU/m
- Stratagene Mx3000/Mx3005pp - 84 IU/ml

TrusMQ Real-Time PCR Kit

Multiplexed Quantitative PCR Assays (Lyophilized)

TrusMQ Real-Time PCR Kit

Multiplexed Quantitative PCR Assays (Lyophilized)

SARS-CoV-2 Nucleic Acid Detection Kit

For quantitative detection ORF1ab gene and N gene of SARS-CoV-2 in oropharyngeal swabs, nasopharyngeal swabs, sputum, whole blood, serum, bronchoalveolar lavage, stool, and nasopharyngeal aspirate samples.

Key features

★ Easy and convenient : Lyophilized form for better stability, easy operation, convenient transportation and storage.

★ High sensitivity : Lyophilized reagents allow a large loading volume (up to 25 ul of samples) to improve detection sensitivity.

★ Applicable models : Compatible with multiple PCR platforms.

★ Anti-contamination : No cap-opening during the entire process, minimum aerosol contamination.

TrusMQ Real-Time PCR Kit

Multiplexed Quantitative PCR Assays (Lyophilized)

SARS-CoV-2 and Influenza A/B Virus Nucleic Acid Detection Kit

For quantitative detection ORF1ab gene and N gene of SARS-CoV-2, M gene of influenza A virus and NP gene of influenza B virus in oropharyngeal swabs, nasopharyngeal swabs, sputum, whole blood, serum, bronchoalveolar lavage, stool, and nasopharyngeal aspirate samples. .

Key features

★ Easy and convenient : Lyophilized form for better stability, easy operation, convenient transportation and storage.

★ High sensitivity : Lyophilized reagents allow a large loading volume (up to 25 ul of samples) to improve detection sensitivity.

★ Applicable models : Compatible with multiple PCR platforms.

★ Anti-contamination : No cap-opening during the entire process, minimum aerosol contamination.

TrusMQ Real-Time PCR Kit

Multiplexed Quantitative PCR Assays (Lyophilized)

Monkeypox Virus Nucleic Acid Real-Time PCR Detection Kit

The Monkeypox Virus Nucleic Acid Detection Kit is used for quantitative detection of Monkeypox Virus in oropharyngeal swabs, nasopharyngeal swabs, saliva, serum, urine, lesion exudate and lesion tissue samples.

Key features

★ Easy to operate : Only two steps are needed. “Add the sample” and “Test on the machine” ; also suitable for no extraction and routine extraction.

★ Short reaction time : Results reported in 30 minutes for TrusMQ series system and less than 60 minutes for other Real-Time instruments.

★ Human-derived internal standard : Monitoring the collection, transport and extraction of the sample to ensure the accuracy of the results.

★ Lyophilized reagent : Room temperature transport and storage at 2~8°C ; Increasing loading capacity and reducing costs ; Higher sensitivity.

★ Sample type : Oropharyngeal swabs, nasopharyngeal swabs, saliva, serum, urine, lesion exudate and lesion tissue samples.

★ Compatible instruments : TrusMQ series system, ABI7500, Roche Z 480, Biorad CFX96, SLAN96, Gentier, Archimed X6/X4, Lepgen-96, etc.

TrusMQ Real-Time PCR Kit

Multiplexed Quantitative PCR Assays (Lyophilized)

HPV Nucleic Acid Real-time PCR Detection Kit

For simultaneous quantitative detection of 15 Human Papillomavirus high-risk types with differentiation of 16, 18 type and 13 others without differentiation [31, 33, 35, 39, 45, 5, 52, 56, 58, 59, 66, 68, 82] in cervical swab samples.

Key features

★ Easy and convenient : Lyophilized form for better stability, easy operation, convenient transportation and storage.

★ High sensitivity : Lyophilized reagents allow a large loading volume (up to 25 ul of samples) to improve detection sensitivity.

★ Fast detection : Ensuring accurate and timely results.

★ Anti-contamination : No cap-opening during the entire process, minimum aerosol contamination.

TrusMQ Real-Time PCR Kit

Multiplexed Quantitative PCR Assays (Lyophilized)

Mycobacterium Tuberculosis Complex Nucleic Acid Real-Time PCR Detection Kit

For quantitative detection of the M. tuberculosis, M.bovis, M.africanum and M.microti in human sputum.
Detection loci : IS6110 gene and IS1081 gene.)

Key features

★ Easy and convenient : Lyophilized form for better stability, easy operation, convenient transportation and storage.

★ High sensitivity : Lyophilized reagents allow a large loading volume (up to 25 ul of samples) to improve detection sensitivity.

★ Applicable models : Compatible with multiple PCR platforms.

★ Anti-contamination : No cap-opening during the entire process, minimum aerosol contamination.

TrusMQ Real-Time PCR Kit

Multiplexed Quantitative PCR Assays (Lyophilized)

Genitourinary pathogen nucleic acid real-time PCR detection kit

For quantitative detection of Neisseria gonorrhoeae, mycoplasma (Ureaplasma solani, Mycoplasma genitalium, Mycoplasma humanum), herpesvirus in male and female urethral secretions, female vaginal secretions, female cervical cell samples.

Key features

★ Easy and convenient : Lyophilized form for better stability, easy operation, convenient transportation and storage.

★ High sensitivity : Lyophilized reagents allow a large loading volume (up to 25 ul of samples) to improve detection sensitivity.

★ Fast detection : Ensuring accurate and timely results.

★ Anti-contamination : No cap-opening during the entire process, minimum aerosol contamination.

TrusMQ Real-Time PCR Kit

Multiplexed Quantitative PCR Assays (Lyophilized)

ALK/ROS1/MET Gene Fusions and Mutations Real-Time PCR Detection Kit

For quantitative detection of the ALK/ROS1 /MET in Tissue samples including fresh surgical tissue, puncture tissue, and FFPE.

Key features

★ Easy and convenient : Lyophilized form for better stability, easy operation, convenient transportation and storage.

★ High sensitivity : Lyophilized reagents allow a large loading volume (up to 25 ul of samples) to improve detection sensitivity.

★ Applicable models : Compatible with multiple PCR platforms.

★ Anti-contamination : No cap-opening during the entire process, minimum aerosol contamination.

TrusMQ Real-Time PCR Kit

Multiplexed Quantitative PCR Assays (Lyophilized)

EGFR gene mutations real-time PCR detection kit

For quantitative detection of the EGFR mutations in Tissue samples
(fresh surgical tissue, puncture tissue, FFPE)

Key features

★ Easy and convenient : Lyophilized form for better stability, easy operation, convenient transportation and storage.

★ High sensitivity : Lyophilized reagents allow a large loading volume (up to 25 ul of samples) to improve detection sensitivity.

★ Applicable models : Compatible with multiple PCR platforms.

★ Anti-contamination : No cap-opening during the entire process, minimum aerosol contamination.

TruIQ Isothermal Qualitative Nucleic Acid Detection System

Enzymatic Fast Amplification (EFA) Detectors

TrustBio Corporation

Enzymatic Fast Amplification (EFA) Detectors

The detection techniques for our isothermal transcription-based kits, the EFA Assays, involve colorimetric and fluorescent methods.

TrusIQ Series System

Specifications

Category	TrusIQ 16 (Fluorescent)	EasyCheck (Colorimetric)
Dimensions	W 156 x D 205 x H 153mm	Small & Smart & Simple
Weight	3.2kg	-
Throughput	16	1
Fluorescence Channels	Channel 1: FAM, SYBR Green I, SYTO 9, EvaGreen, LC Green. Channel 2: HEX, VIC, TET, JOE.	-
Display	7-inch touch screen	-
Consumables	High-brightness, long-life, maintenance-free LED light source	-

TrusIQ Isothermal Qualitative Nucleic Acid Detection kit

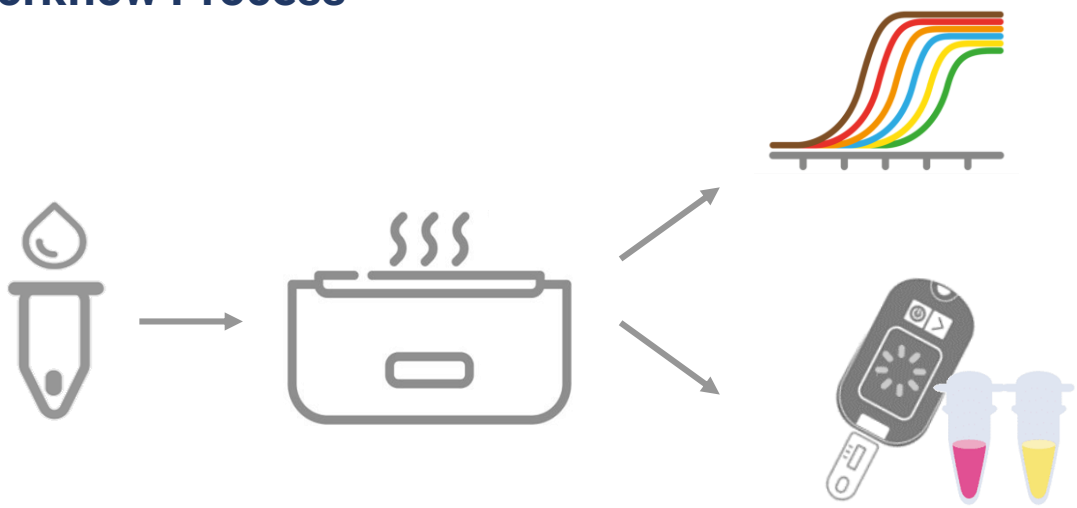

Enzymatic Fast Amplification (EFA) Assays

TrustBio Corporation

Enzymatic Fast Amplification (EFA) Assays

Isothermal amplification is a group of methods which utilize a constant temperature to amplify DNA/RNA targets, such as Loop-Mediated Isothermal Amplification (LAMP). Our Enzymatic Fast Amplification (EFA) is a novel isothermal amplification method and is the exponential amplification of specific nucleic acid sequences at a specific temperature using specific enzymes and strand displacing polymerase, without any temperature changes.

Magnetic Beads

Magnetic Beads for Molecular Biology

TrustBio Corporation

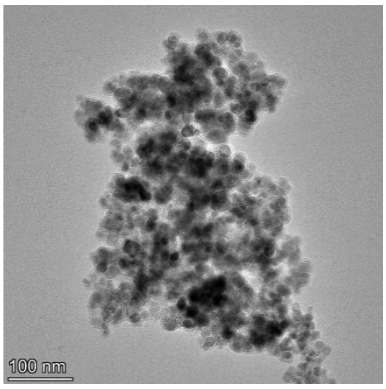

TrusPure Magnetic Beads for DNA/RNA Extraction

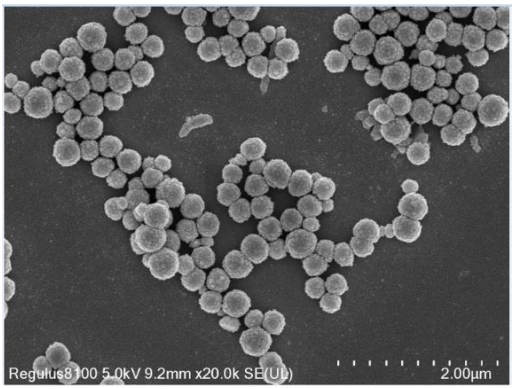

Silica coated magnetic beads/Carboxyl magnetic beads are commonly used for extraction and purification of DNA/RNA. In the fight against COVID-19, viral RNA extraction kits have become indispensable detection tools for confirming the cases. TrustBio can provide high quality silica magnetic beads for DNA/RNA extraction.

Key features

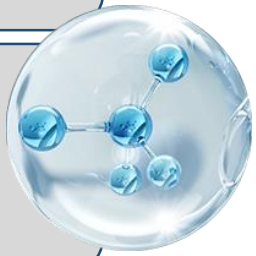

★ Narrow particle size distribution
★ Broad surface functionalities
★ Superparamagnetic and high magnetic response
★ Excellent nucleic acid binding capacity
★ Without magnetic memory

TrusPure Magnetic Beads – S01/S02
for DNA/RNA isolation and purification
Silica coated magnetic particles designed for high-throughput and rapid extraction and purification of nucleic acids.

TrusPure Magnetic Beads - C01
for size-selective DNA/RNA isolation and purification
Carboxyl Magnetic Beads are magnetic particles have free carboxyl groups on the surface for convenient covalent coupling of target molecules.

Magnetic Beads

Magnetic Beads for Molecular Biology

Specifications

	TrusPure Magnetic Beads - S01	TrusPure Magnetic Beads - S02	TrusPure Magnetic Beads - C01
Concentration	40 mg/ml in water (0.05% sodium azide)		
Storage conditions	Room temperature		
Average particle size	0. 75 - 1.0 μm	~ 0. 75 μm	0. 6 - 0.9 μm
Stability	24 months from manufacture date at room temperature (Do not freeze)		
Shelf life	24 months		
Recommend Buffer	Sterile DI water		
Functional Group	-OH (Silanol)	-OH (Silanol)	-COOH(Carboxyl)
Appearance	Black	Dry brown	Brown
Bead Type	Silica coated, core-shell structure		Carboxyl Magnetic Beads, core-shell structure
Method	Manual, Automated		

Bulk quantities and OEM manufacturing are also available for purchase at highly competitive prices.
